ABOUT

Full-stack Mobile Developer, specialized in React Native, React Js, Node Js.

Have been working professionally with React Native, Node Js since 2021, developing solutions and enhancing application performance in the fintech sector.

Strong understanding of system design, using microservices, event-driven patterns, and distributed architectures to build horizontally scalable and resilient systems

Take great pride in crafting clean and efficient code, always focused on processes, as they are what truly make a difference in the success of a great project.

Strong understanding of UX/UI principles and am deeply committed to app quality and usability. Focus on identifying true needs and delivering greater value than just a simple digital product.

Achievements:

- Worked professionally with React and React Native for 3 years, developing solutions and improving application performance in the fintech sector.
- Main technologies include React Native, React js, TypeScript, Node js, Nest js.
- Software Engineer at Contabilizei, building scalable backend services and mobile features for a digital banking platform with 40k+ active users, using Node.js, PostgreSQL, TypeScript, Express, React Native, and event-driven patterns.
- Refactored a legacy monolithic system into a distributed microservices architecture, leveraging Kafka for event streaming, asynchronous communication, and decoupled service orchestration.
- Strong efficiency in troubleshooting production errors, applying root-cause analysis and log investigation to identify and resolve issues quickly.
- Experienced in cybersecurity fundamentals, with hands-on practice identifying vulnerabilities in large-scale systems through responsible and ethical testing.
- Regarding soft skills mentioned, as a helpful professional always ready to collaborate with colleagues. Prioritizes code quality, fast learner, and creative thinker.

WORK EXPERIENCE

Rubcube - Mobile Engineer with React Native CLI & Expo using TypeScript | Tailwind | Styled Components | Story Book | Book | Jest | Redux, Gluestack.

October 2022 – Present

Presidente Prudente, Brazil · Remote

- Developed and integrated new features and complete user flows in a hybrid mobile app using React Native, TypeScript, Expo, and a custom design system.
- Developed and maintained a reusable design system, standardizing UI components and ensuring visual and behavioral consistency across the application.
- Enhanced code quality and maintainability by building custom hooks that centralized shared logic, reducing repeated code and increasing development efficiency.
- Optimized screens by refactoring components and using useMemo and useCallback to improve rendering performance and lifecycle efficiency.
- Participated actively in code reviews, ensuring code quality, adherence to architectural patterns, and knowledge sharing across the team.
- Implemented global and local state management using Redux Toolkit, ensuring predictable and maintainable data flows.
- Integrated Sentry to monitor and analyze runtime errors, reducing production issues and accelerating bug detection.

Rubcube — Backend Engineer working with TypeScript, Node.js, Inversify, PostgreSQL, DynamoDB, DDD, Jest, Docker.

October 2022 – Present

Presidente Prudente, Brazil · Remote

- Led the design and proposal of a new event-driven architecture leveraging NestJS and Kafka, migrating the existing monolith into decoupled microservices.
- Designed and maintained backend services using Domain-Driven Design (DDD), improving modularity, testability, and long-term scalability.
- Developed REST APIs and business logic using TypeScript, Node.js, and Inversify, ensuring clean dependency injection and consistent architecture patterns.
- Implemented automated unit and integration tests with Jest, increasing reliability and preventing regression across critical services.

- Integrated logging and monitoring solutions CloudWatch to improve visibility, diagnostics, and incident response.

Valu Finance - Freelance Security Pentester

2025, Presidente Prudente, Brazil

- Conducted penetration tests and security assessments for a client company, identifying vulnerabilities in web applications.
- Delivered a full security report with proof-of-concept findings, risk classification (CVSS), and recommended mitigation strategies.
- Followed ethical and responsible disclosure practices to ensure client safety and compliance.

ORANGO-IO - Freelance Front-end developer working with Typescript | React js | Styled Components | Jotai | Axios | Yup

2025, Presidente Prudente, Brazil

- Collaborated on the CAROL medical triage web tool, building responsive UI components and contributing to a user-friendly interface designed to assist healthcare professionals during patient assessment.

EDUCATION

Universidade do Oeste Paulista (Unoeste), Presidente Prudente, SP - Brazil

Bachelors degrees, Information Systems, Completion: Jul 2026

CERTIFICATIONS & SKILLS

- **Instructor – Web & API Security: Fundamentals, Tooling, and Attack Simulation, INFOESTE 2025 (Unoeste) - Oct 2025**
- **React Full Course - Udemmy - Aug 2024**
- **Instructor – Introduction to ReactJS, INFOESTE 2023 (Unoeste) – Oct 2023**

LANGUAGES

- **English - Working proficiency**
- **Portuguese - Native**
